

Why Rajant?

Trailblazers invent paradigms while others follow them.

Today organizations are highly dynamic operating environments that rely on an ever-growing number of sophisticated applications to support the increasing numbers of personnel, vehicles, and equipment operating in remote, geographically-dispersed locations. As a result, mobility has become a major driver shaping networking requirements. Simultaneously, the Internet of Things (IoT), machine-to-machine (M2M) connectivity, and autonomy are helping improve productivity, streamline operations, and control costs. To interact with and manage this “network of things,” network infrastructures must be fully mobile enabled and provide optimal broadband connectivity organization-wide. This has created a growing demand for private wireless mesh networks because organizations want both the internal control over infrastructure, data, and applications, as well as the benefits these powerful business enablers provide.

Knowing that satellite, LTE, Wi-Fi, and other fixed wireless networks have inherent limitations, Rajant focused its research and development efforts on delivering its one-of-a-kind

Kinetic Mesh® networks. Whether provisioning a new network or expanding existing infrastructure and capabilities, Rajant’s private wireless mesh networks provide continuous on-the-move access to data and applications in real time. Today, Rajant is the category leader in providing mesh networks that are proven to deliver unparalleled reliability, performance, scalability, and security in an easy-to-deploy, portable footprint.

Rajant’s Kinetic Mesh networks are uniquely equipped to handle the complexities of today’s evolving industrial operations. The technology behind Kinetic Mesh powers the Living Network™ – a “living” mesh solution that moves and evolves to meet today’s and tomorrow’s connectivity demands. Rajant networks can transform virtually any asset into network infrastructure, interconnecting diverse environments and all the things that move within them. They offer the adaptability, flexibility, intelligence, and mobility required to connect to, communicate with, and control assets and personnel whenever and wherever needed.

How We Started

Trailblazers see opportunities where others see obstacles.

Rajant Corporation is a global company headquartered just outside of Philadelphia, PA. When Rajant’s founders saw the weaknesses with mobile voice and data networks during the events of 9-11, they envisioned a *truly* mobile network that would provide anywhere-anytime voice, video, and data communications. In 2002, the Company rolled out its Kinetic Mesh solution and began delivering wireless networks that deliver highly reliable connectivity regardless of conditions, provide robust security, grow stronger as network nodes are added, and allow all wireless nodes to be in motion at all times. These powerful networks consist of industrial-strength Rajant BreadCrumb® wireless nodes powered by Rajant’s patented¹ InstaMesh® networking protocol. Building on its initial success in extremely demanding military deployments, Rajant quickly expanded its reach into industries such as mining and oil and gas.

Technology Differentiation

Trailblazers invent new technologies rather than license them.

Seeing the inherent limitations in traditional wireless mesh networks, Rajant took a completely different and highly innovative approach with its Kinetic Mesh® solutions. Whether deploying a network with ten or several hundred nodes, Rajant wireless networks provide several key features, including multi-frequency, multi-transceiver transmissions; physical-layer data rates to 300 Mbps; military-grade security; no controller-node requirement; built-in redundancy with no single point of failure; and self-configuring, self-healing operations. Rajant solutions easily integrate with existing satellite, LTE, 3G/4G, fixed wireless, and Wi-Fi networks. And, Rajant's Kinetic Mesh networks are the only solutions proven to establish and sustain any-node to any-node communications across hundreds of high-bandwidth nodes with no single point of failure while providing high quality-of-service for years – unattended.

Markets Served

Trailblazers create markets while others chase them.

While Rajant's initial success was built on military, mining, and oil and gas, the Company is uniquely positioned to serve many additional markets such as transportation, ports, agriculture, and civil government. Rajant Kinetic Mesh networks are helping organizations increase productivity, improve safety, and cut costs in a wide array of scenarios, involving manned and autonomous vehicles such as trucks, dozers, police cars, trains, and buses, as well as unmanned ground vehicles (UGVs) and unmanned aerial vehicles (UAVs). Rajant solutions support many diverse applications, including monitoring and managing vehicle and equipment health, assets, video surveillance, vehicle speeds and locations, first-responder communications, convoy communications, and border crossings.

In all areas, Rajant is a true trailblazer dedicated to innovating new wireless communication capabilities for organizations worldwide.

Customer Support

Trailblazers put customers first and profits second.

With thousands of nodes deployed worldwide, Rajant solutions impact the crucial inner-workings of its customers' operations and processes, and that is a responsibility the Company takes seriously. So, Rajant consistently strives to meet or exceed the promises we make to our customers. For more than a decade, Rajant customers have rated the Company's support services as superb and unparalleled. That commitment to customer service extends globally through Rajant's trained and authorized Kinetic Mesh partner network. Authorized distributors, integrators, and solution providers provide pre- and post-sales support to customers worldwide, offering local and regional installation, configuration, operations, management, troubleshooting, and diagnostics services. And, Rajant backs up its partners with training, technical support, and engineering expertise to ensure that each customer's system is delivering the benefits promised.
